Title: David Richter-Trummer

Picture: David Richter-Trummer

8	<b>Three-country flight: Collecting experiences</b> A cross country flight is always a little adventure, especially when you are travelling without an engine and the journey takes you over three countries.	54	Dynamic „foehn“ and mountain waves Why are warm „foehn“ air masses in the lee side forced to descend of the thermodynamically determined static buoyancy?
16	<b>Thermal tactics and the ideal centring aid</b> Eleven points form the basis for thermal flight tactics, and an ideal centring aid can use this knowledge.	56	Climbing under ‘water bags’ A pilot’s report from the first ever Double Seater Grand Prix in Aalen
24	<b>Less is more</b> The ACD-57 instrument cluster combines altimeter, radio and transponder combined in one display. We trialled this in everyday flying..	62	Under palm trees - a visit to the Philippines An enthusiastic glider pilot has set up gliding operations to the tropical island state between Borneo and Taiwan.
28	<b>Flatland Magic – Flight to the Dutch Wadden Island</b> Flying over the sea in a glider – a challenge that requires meticulous flight planning, but then rewarded with a spectacular view.	70	Attention: „Blitzer“! What are speed camera good for? A field report
38	<b>Flight report DG 800B</b> The glider has long since completed its maiden flight but it is still very popular as a companion for long distances.	76	B12 Over Berlin: The limitless sky With the legendary two-seater glider from the Kammermark over the city of Berlin.
44	<b>Data analysis of glider flights, part 2: Thermal maps and updraft patterns</b> A multitude of measured flight data, combined with ground type and land use makes thermals assessable – a great benefit, especially for less experienced pilots.	82	Stories from the cockpit
